

1 Page One

This is line 8 of the source. Ctrl(or Cmd)+click on this sentence in the rendered PDF and it should jump back to this exact line.

Here is line 11, a separate paragraph to give the previous one its own SyncTeX box so forward/inverse search can distinguish between the two.

1.1 A subsection

Line 16 lives inside this subsection. Try running forward search on it:

```
vimong --forward-search testdata/synctex-demo.tex 16 testdata/synctex-demo.pdf
```

2 Page Two

Line 25 should land on the second page once the document is long enough to overflow onto it. If it doesn't, add a few more filler paragraphs above.

2.1 Another subsection

Line 30 is here for a second inverse-search check on a different page, to make sure the page number reported by SyncTeX is correct as well as the line number.
